Brainstorming & Idea

Prioritisation

1. Introduction

ShopEZ is a MERN Stack E-Commerce Application developed to provide users with a simple and secure online shopping experience. The platform allows customers to browse products, create accounts, manage wishlists, add products to carts, and perform purchases efficiently. The project aims to overcome common challenges faced in online shopping platforms such as poor navigation, insecure authentication, and inefficient product management. Through brainstorming and idea prioritization, the most important features were identified and selected for development.

2. Problem Statement Selection

Many users experience difficulties while shopping online due to complicated interfaces and poor product organization. Customers often struggle to find products quickly and manage their shopping activities effectively. Existing systems may lack secure authentication and efficient cart management features. These issues can reduce customer satisfaction and affect the overall shopping experience. Therefore, a user-friendly and secure e-commerce platform is required.

.

3. Idea Generation & Grouping

3.1 Raw Idea Listing

Idea ID	Idea Description	Category	Retained?
I-01	User Registration System	Authentication	✓ Yes
I-02	User Login System	Authentication	✓ Yes
I-03	Product Listing Page	Product Management	✓ Yes
I-04	Product Details Page	Product Management	✓ Yes
I-05	Shopping Cart	Cart Management	✓ Yes
I-06	Wishlist Feature	User Experience	✓ Yes
I-07	Checkout Page	Order Processing	✓ Yes
I-08	User Profile Management	User Management	✓ Yes

Idea ID	Idea Description	Category	Retained?
I-09	CRUD Operations	Product Management	✓ Yes
I-10	Product Search	Advanced Features	● Future Scope
I-11	Product Reviews	Advanced Features	● Future Scope

3.2 Idea Grouping — Affinity Diagram

4. Idea Prioritisation — MoSCoW Framework

Priority	Feature / Idea	Rationale
Must Have	User Registration	Required for system access
Must Have	User Login	Authentication and security
Must Have	Product Listing	Core shopping functionality
Must Have	Product Details	Product information display
Must Have	Shopping Cart	Purchase management
Must Have	Wishlist	Save products for later
Must Have	CRUD Operations	Product management
Must Have	Checkout Page	Order completion

Priority	Feature / Idea	Rationale
Could Have	Product Search	Future enhancement
Could Have	Product Reviews	Future enhancement

5. Conclusion

The brainstorming and ideation phase successfully identified the essential features required for the ShopEZ E-Commerce Application.

The selected features form the Minimum Viable Product (MVP) and focus on secure authentication, product management, shopping cart functionality, wishlist support, checkout processing, and CRUD operations.

The application aims to improve the online shopping experience by providing a secure, efficient, and user-friendly platform developed using the MERN Stack (MongoDB, Express.js, React.js, and Node.js).
